InMail #1: Critical Comms Fail? Not With This.

Hi <<First Name>>,

What's your backup plan when your network goes down?

T-PRIORITY™ is the first 5G network slice built just for public safety—no throttling, no lag, and **always on**, even during outages. Pair it with **SafeGrid** and you get real-time command visibility over every unit in the field.

Want to see how it's working for departments like Wichita PD?

Let's connect.

InMail #2: Your Fleet Can Do More.

Hi <<First Name>>,

What if your patrol cars could act like mobile command centers?

With **T-PRIORITY™ + SafeGrid**, agencies are running dispatch, video, CAD, drones—you name it—right from the vehicle. It's not a theory. It's happening now.

Happy to show you what it could look like for your department.

Up for a quick chat?

InMail #3: Built for Bad Days

Hi <<First Name>>,

Every network works fine—until it doesn't.

T-PRIORITY™ is **the only 5G built for public safety**. It keeps your team connected when other carriers fail. And with SafeGrid, you get eyes on everything happening in the field—live.

Think your current setup can handle the next outage?

Let's talk.

InMail #4: Tech That Doesn't Let You Down

Hi <<First Name>>,

Bodycams. Drones. Dispatch. None of it works if your network doesn't.

T-PRIORITY™ gives law enforcement guaranteed bandwidth, 40% more 5G capacity, and no prioritization hoops to jump through.

SafeGrid adds the situational awareness your command staff needs.

Quick intro call? No pressure—just want to show you what's possible.

InMail #5: What Happens When the Network Fails?

Hi <<First Name>>,

AT&T went down nationwide in 2024. Agencies lost dispatch. Radios went quiet. It'll happen again.

T-PRIORITY™ gives you a second line of defense—built for moments like that. Add **SafeGrid**, and you get visibility into every patrol unit in real time.

Want to stay ahead of the next failure?

Let's chat.

Connect Messages

Option 1:

Saw your work in public safety and wanted to connect. We're helping departments stay connected during outages with a new 5G network slice + command visibility. Thought it might be worth a quick intro.

Option 2:

I work with agencies on next-gen tech like SafeGrid + T-PRIORITY™—keeping officers online, visible, and mission-ready. Thought this might align with your goals.

Option 3:

Noticed your role and wanted to connect. We're helping departments improve field comms + gain real-time visibility with a new public safety-specific 5G solution.

Option 4:

I support public safety teams with tech that stays online even when major networks fail. Thought it might be relevant to your work—happy to connect.

Option 5:

Working on field-tested tech helping departments like yours boost connectivity + reduce downtime. T-PRIORITY™ and SafeGrid™ are changing the game—would love to connect.
