

## Don't Let This Happen to You It Only Takes One Weak Link

A recent high-profile cyberattack on Smarsh/TeleMessage exposed archived communications that were supposed to be secure. Instead, sensitive conversations—some involving U.S. government officials—were left vulnerable, unencrypted, and wide open to exploitation.

This wasn't just a technical failure. It was a failure of trust, of compliance, and of preparedness.

When encryption is only skin-deep and archives are left exposed, the consequences go far beyond IT—they threaten reputations, operations, and national security.

### The Blunt Reality

**The breach happened.**

**It was avoidable.**

**It was costly.**

**And it shook trust — in systems, providers, and promises.**

### Now's the Moment to Lock It Down

Your organization can't afford to be the next cautionary tale. Recent events have shown how easily sensitive data could be exposed when even one part of the communication chain isn't fully secure.

That's where Premier Wireless, in partnership with Movius and T-Mobile, comes in.

## Why Choose MultiLine + Network Mobile Capture

- ✓ Trusted by the Department of Defense and top financial institutions
- ✓ Secure data capture for voice, text, and messaging apps
- ✓ Compliant with FISMA, FIPS, HIPAA, PCI, Basel II, and more
- ✓ Encrypted in transit and at rest
- ✓ Simple deployment and scalable from 100 to 10,000+ lines

We're not here to make empty promises — no one can guarantee perfection.  
But we can offer **the most secure mobile capture environment possible.**

### Limited-Time Offer:

**50% Off MultiLine or Network Mobile Capture for 12 Months**

Available through June 30, 2025  
36-month term | New customers | 100+ lines  
Volume-based discounts available up to 18% ongoing

**Don't wait until the next breach. Act now.**

**Secure My Communications**
