

One Weak Link Can Undermine National Security Don't Let This Happen to You

The recent Smarsh/TeleMessage breach compromised archived communications — including those from U.S. government officials. The culprit? Unencrypted storage and lax system controls.

This wasn't just a tech failure. It undermined operational security, interagency trust, and national interests.

One insecure message chain can jeopardize missions, confidentiality, and accountability.

The Blunt Reality

The breach happened.

It was avoidable.

It was costly.

And it shook trust — in systems, providers, and promises.

Now's the Moment to Lock It Down

Your agency operates in a high-risk environment — FOIA, FISMA, CJIS, and beyond. You need secure mobile solutions that meet government-grade standards.

That's where Premier Wireless, Movius, and T-Mobile come in.

Why Agencies Trust MultiLine + Network Mobile Capture

- ✓ FISMA, FedRAMP, and CJIS-ready mobile communication
- ✓ Full capture for SMS, voice, and encrypted messaging
- ✓ Compatible with secure government-issued devices
- ✓ Real-time monitoring and zero-trust architecture
- ✓ Scalable for local, state, and federal departments

Limited-Time Offer:

50% Off for 12 Months

Offer valid through June 30, 2025 | 36-month term | 100+ lines
Volume-based discounts available up to 18% ongoing

Protect your data. Preserve public trust.
