

Don't Risk a Breach of Care

It Only Takes One Weak Link to Expose Your Entire Network

A recent high-profile cyberattack on Smarsh/TeleMessage exposed supposedly secure communications — including sensitive health-related data. The archived messages were left unencrypted, vulnerable, and easily exploited.

This wasn't just a technical misstep. It was a failure of HIPAA compliance, operational trust, and patient safety.

When encryption is only surface-deep, the consequences go beyond IT — they endanger lives, violate privacy, and undermine your reputation.

The Blunt Reality

The breach happened.

It was avoidable.

It was costly.

And it shook trust — in systems, providers, and promises.

Now's the Moment to Lock It Down

Your hospital, clinic, or care network can't afford to be the next cautionary tale. If one communication channel is insecure, your entire ecosystem is at risk.

That's where Premier Wireless, Movius, and T-Mobile step in.

Why Healthcare Leaders Choose MultiLine + Network Mobile Capture

- ✓ Secure PHI and ePHI transmission across voice, SMS, and apps
- ✓ HIPAA-compliant mobile archiving
- ✓ Encrypted end-to-end — in transit and at rest
- ✓ Seamless provider-patient and inter-staff communication
- ✓ Scalable across hospital groups and networks

Limited-Time Offer:

50% Off for 12 Months

Offer valid through June 30, 2025 | 36-month term | 100+ lines
Volume-based discounts available up to 18% ongoing

Protect patients. Preserve trust. Prevent the next breach.

Secure My Communications
